

Application No. 09/711,567 (Div. of 09/209,706)
Attorney's Docket No. 031221-058

C1
comprises a metathesis polymer which was polymerized upon contact with a catalyst
under normal ambient conditions.

C2
S2
90. (Amended) A tire laminate comprising a tire carcass having an outer
periphery surface, a tire tread having a bonding surface, and a metathesis polymer
adhesive layer between the outer periphery surface of the tire carcass and the bonding
surface of the tire tread, wherein the metathesis polymer adhesive layer was formed by
polymerization upon contact with a catalyst under normal ambient conditions.
